

MIDAS S2 Axle Shaft OD Grinder

A mid-west based construction equipment manufacturing company again selects **Weldon Solutions** for grinding multiple diameters on various axle shafts. This is the first re-designed **midas** CNC grinder to be installed. The new machine features a Z-axis linear motor, increased Z-axis stroke, shear-damper base updates, dual front enclosure door system, and a new 5" stroke hydraulic tailstock with smart cylinder positioning and gear reducer for easy taper compensation. In this process, bearing journals on both ends of the axle and a seal surface are ground to size under gage control with vitrified CBN abrasives. Dressing is accomplished with an electric rotary dresser, monitored by a Dittel acoustic emissions sensor.

System features: **Weldon** long stroke programmable tailstock, **Gil** electric rotary dresser, **Dittel** acoustic emissions sensor, **SBS** automatic wheel balancer, **FRB** face driver and live tailstock center, **Barnes** coolant filtration system, **CGI** in-process sizing gage system, **SuperAbrasives Inc.** vitrified CBN grinding wheel, **Consort** rotary diamond dressing roll, **FANUC 32i** BT CNC control.

Weldon Solutions offers a full line of CNC OD, ID, and combination grinders. As a FANUC Robotics integrator Weldon can also address your machine tending, material removal, material handling, and packaging/palletizing needs.

QUALITY, Over and Over Again.
